ADHESION ENHANCER FOR THE LEAF FALL SEASON

- Pinpoint delivery on the rail head - no wastage.
- Treatment speeds up to 100 kph
- More rail head treated in the same time.
- Faster treatment of the same amount of rail head.
- Ability to extend circuits.

TRACK GRIP |60|

Product Description

Track Grip 60 is an adhesion enhancer designed for deployment at 100 kph during the autumn season. This allows an optimum 100 kph autumn treatment programme of high pressure water jetting and adhesion enhancer wherever conditions merit. Deployment of Track Grip 60 is pinpoint, which means no wastage, maximum efficiency and lowest cost.

For traditional 40 mph deployment, usage of Track Grip 60 is significantly lower than competitor products without compromising on performance. Track Grip 60 also contains an agent that allows track circuits that have been disabled by non-conductive leaf material, to become operable again. Patent Applied.
